

NEW EMERGENCY RESPONSE PRODUCT

The spill response team at Matrix have tapped into a unique, new innovative clean-up technology. Matrix has implemented the use of Gelco products in southern Saskatchewan and south-western Manitoba. These products have been approved by Environment Canada and have been placed on the Emergency Science Technology (EST) list of suitable products to be used on water bodies where fish frequent or inhabit.

The Gelco products are manufactured as granular powders and are used to encapsulate and solidify wastes into a manageable, disposable jell. Gelco 100 is utilized for water-based liquids, while Gelco 200 is utilized for hydrocarbon-based liquids. The jell collects the contaminants, floats, is easily separated from water and is suitable for landfill disposal.

Matrix has successfully used Gelco 200 in the recovery of both refined and unrefined hydrocarbon liquids on water bodies. One of the benefits of using Gelco 200 is that the flammability hazards associated with the volatile hydrocarbon components is significantly reduced through the encapsulation and solidification process.
